Document Date:	June 2026

1. Business Overview

Paragliding Oludeniz (Aksoy Ltd) is a tandem paragliding company based in Olüdeniz, Fethiye, Turkey. Operating from Babada Mountain at 1,960m altitude, we offer tandem paragliding flights over the world-famous Blue Lagoon. Our team of certified pilots has over 30 years of combined experience in tandem paragliding, serving thousands of tourists annually from across Europe, the UK, and the Middle East.

We use Google Ads to promote our flight booking services to tourists actively searching for paragliding experiences in the Oludeniz and Fethiye region. Our primary campaign types include Performance Max and Local Search Ads targeting high-intent travellers.

2. Google Ads API Usage

The Google Ads API is integrated into our internal admin dashboard built on Next.js. The integration serves three primary purposes:

Feature	Description	API Endpoint
Campaign Monitoring	View active campaigns, status, and performance metrics	GoogleAdsService.SearchStream
Performance Metrics	Track impressions, clicks, CTR, cost, and conversions	GoogleAdsService.SearchStream
Campaign Creation	Create Local and Performance Max campaigns for Maps Advertising	GoogleAdsService.MutateCampaigns

3. Technical Architecture

3.1 Technology Stack

Frontend & Backend: Next.js 14 (App Router) deployed on Vercel

API Integration: REST-based Google Ads API v19

Authentication: OAuth 2.0 with refresh token — server-side only

Hosting: Vercel (serverless functions)

3.2 Authentication Flow

- OAuth 2.0 refresh token stored securely as Vercel environment variable

2. Each API request generates a short-lived access token via `oauth2.googleapis.com/token`
3. Access token used with Developer Token header for all Google Ads API calls
4. All API calls made server-side — credentials never exposed to the browser

3.3 Access Control

The admin dashboard is protected by session-based authentication. Only authorised internal users (the business owner) can access the Google Ads management panel. The API tool is strictly for internal use only — no third-party or public access is provided.

4. Data Usage & Privacy

All data retrieved via the Google Ads API is used exclusively for internal business reporting and campaign management. No Google Ads data is shared with third parties, sold, or used for any purpose other than managing our own advertising campaigns. Data is displayed only within our private admin dashboard and is not stored in any external database.

5. API Call Volume & Frequency

API usage is minimal and confined to manual admin dashboard interactions. Estimated daily API calls: 5–20 read requests (campaign/metric queries) and 0–2 write requests (campaign creation or updates). No automated or scheduled API polling is implemented.
